

## 01 51 13 – Temporary Electricity

### 1. General

- A. Electricity for light, power and construction purposes will be provided at a point designated by the Owner on the project site. It shall be the responsibility of the Contractor to run any lines necessary from the designated point for the execution of the work. The Contractor will be charged the same rate that the University pays for electricity. The power available is 120/208, 3 Phase and 200 amps.
- B. With the permission of Owner, the Contractor may utilize existing power supplies within the work area provided that such use does not interfere with any building or laboratory functions.
- C. With the permission of Owner, the Contractor may reroute power lines to fit specific or extraordinary conditions.
- D. Utilities and services shall not be interrupted without the Owner's approval as to time and duration. No utilities and services serving existing facilities shall be discontinued until the new service connections are installed unless temporary connections are installed to serve the existing facilities. Owner's representative must be present at all service interruptions.
- E. This specification section can be rewritten due to specific or extraordinary field conditions.
